Rhodium XT70 Extended

Simply better

At Rhodium, the continuous process of developing our cutting and grinding discs never stops. With its XT70 Extended, the Burgbrohl-based manufacturer demonstrates the performance improvements possible from systematic development work. In day-to-day working practice, this means faster job completion and an improved product lifetime while keeping the same price point for these discs.

This thin cutting disc has since become the industry standard for fast cutting of metal sheets, steel, stainless steel and many other materials. Although the 1.0 mm disc was viewed with some reticence by the market initially, its benefits – especially when used on handheld tools – soon managed to win over industry users. Following in the footsteps of the trendsetting Rhodium XT70, Rhodium now presents the XT70 Extended, the second generation of this super-successful cutting disc. Extended by name – and by nature.

Rhodium focuses on performance: the new XT70 Extended features improved cutting performance with reduced sparking, high stability and very low vibration while working. This makes the cutting disc ideally suited for use on the construction site or for fitting work – basically anywhere where angle grinders need to get the job done quickly. All in all, disc performance in terms of cutting speed and durability has been increased by 20 percent compared with the previous model. This makes it easier to work with and truly justifies the 'Extended' tag. In terms of day-to-day work, this translates into significant time savings that halve working time with faster cuts and fewer disc changes.

Rhodium focuses on Extended: as part of the company's continuous R&D process, existing tools are taken apart piece by piece and their component parts analysed. Each of these elements is put on the test bench to identify improvements – from raw materials to material mixes or the production process. The best elements are then combined to ensure that new tools always feature performance-optimised quality. This, in turn, guarantees that the Extended tools always embody the latest product engineering advancements. For end users, this means the peace of mind of knowing that they get the performance they need to achieve more.

Rhodium focuses on the customer: By keeping the model designation the same and just adding 'Extended', end users enjoy the familiarity of the standard product they know well while simultaneously receiving a significantly improved tool. Another benefit of the Extended concept from Rhodium is that this new tool is not accompanied by a price hike. The manufacturer continues to expand

PRESS RELEASE

RHODIUS

the Extended line to offer core tools in its product portfolio in this new performance class.

The new XT70 Extended also typifies the 'Simplify Your Work' approach taken by the Burgbrohl-based manufacturer, which lets end users concentrate on the job in hand and therefore maximise their potential performance. Time no longer needs to be wasted on tracking down a tool which is able to meet their demanding requirements. That work has already been done by Rhodius.

Rhodius Abrasives GmbH is known as a pioneering maker of specialist tools for machine-based metal cutting and grinding. Formed in 1952, the company is known internationally for its innovations in the field of extra-thin cutting discs. Rhodius Abrasives GmbH distributes its wide range of products via its network of specialist dealers. Key groups of users are those in manufacturing and the skilled trades – and metal construction in particular. Some years ago, Rhodius Abrasives GmbH established a clear digital strategy to offer its customers an optimum level of service. Part of the Carborundum Universal Ltd (CUMI) Group since 2022, the company's head office is located in Burgbrohl (Rhineland-Palatinate). Rhodius Abrasives GmbH ships its products to more than 100 countries and its export ratio is 70%. The specialist toolmaker employs around 380 people worldwide
